Summary

AI Engineer with 8+ years of full-stack engineering experience, now focused on building LLM and agentic applications for enterprise users. Hands-on across the AI stack — RAG pipelines, document retrieval with embeddings and ChromaDB, LLM orchestration with LangChain and the Claude API, and real-time streaming via Server-Sent Events (SSE) — backed by strong Node.js fundamentals and a track record of secure, scalable APIs. Comfortable in ambiguity, repeatedly taking vague problems from concept to deployed, cloud-native product on AWS.

Skills

AI ENGINEERING

- LLM APIs & core: Anthropic Claude API / SDK, OpenAI API / SDK; function calling; JSON Schema validation; structured output; MCP server; model selection / routing
- Prompt & context engineering: ReAct, few-shot, CoT; prompt caching; context compaction; conversation history management; token counting & cost monitoring
- RAG: embeddings (text-embedding-3-small, all-MiniLM-L6-v2, BGE), ChromaDB, Cohere reranker, hybrid retrieval (BM25 + Dense)
- Agent / multi-agent: LangChain, LangGraph, Anthropic Computer Use
- AI coding: Claude Code, Codex
- Multi-modal: Claude Vision, GPT-4o

FULL STACK

- Backend & APIs: Python, Node.js, FastAPI, Django; secure REST & GraphQL APIs; SSE streaming
- Frontend: React, Next.js, TypeScript, Tailwind CSS, Material UI, Chakra UI
- Cloud & DevOps: AWS (ECS Fargate, Lambda, S3, CloudFront, EFS, ECR, Cognito, ALB), Docker / Docker Compose, Helm, GitHub Actions CI/CD
- Database: PostgreSQL, MySQL, DynamoDB, Redis

AI Engineer Projects

JiraGPT — Enterprise Agentic AI Assistant

Multi-vendor LLM · Azure AKS

- Built a Jira-integrated AI assistant on a microservice architecture (Django + 2× FastAPI + React 19) where users create tickets, run reports, bulk-transition workflows, and generate release notes entirely in natural language.
- Designed a regex-fast-path + LLM-fallback intent router dispatching natural language into 8 agentic business branches (RAG Q&A, Text-to-JQL, ticket creation, bulk transitions, fixVersion, comment summary, release notes, sprint reports), with preview→confirm safety before any write action.
- Delivered pluggable, multi-vendor LLM backends — local Ollama and cloud Azure AI Foundry (Llama-3.3-70B) — switchable at runtime, integrating established and emerging vendors as the ecosystem evolves.
- Implemented enterprise-grade security: per-user Fernet-encrypted Jira tokens, Azure AD / MSAL auth, and Azure Key Vault secret management (CSI Secrets Store + Workload Identity).
- Engineered a RAG pipeline (1024-dim BGE embeddings + ChromaDB per-project collections, nightly Celery-scheduled ingestion, Redis-lock-deduplicated backfill) with Langfuse end-to-end LLM observability; deployed 9 microservices to Azure AKS via Helm, one-command local Docker Compose.

AI Interactive Résumé — Production RAG Application on AWS

LangChain · Claude API · FastAPI

- Architected an end-to-end RAG pipeline — structured data modelling → HuggingFace all-MiniLM-L6-v2 embeddings → ChromaDB vector store → top-k (k=4) retrieval → context injection — with LangChain orchestration and Anthropic Claude API (claude-sonnet-4-6) generation.
- Built a real-time FastAPI backend with Server-Sent Events (SSE) for token-by-token streaming, retaining the last 10 conversation turns for coherence while capping token cost; grounded, anti-hallucination, bilingual output.
- Added a Recruiter Mode that auto-detects a pasted JD and produces a structured match/gap analysis, turning the résumé into an active persuasion tool.
- Deployed a cloud-native architecture on AWS (ECS Fargate, S3 + CloudFront, EFS, ECR) with GitHub Actions CI/CD, including data-driven auto re-embedding on résumé data changes (MLOps).

Fullstack Engineer Projects

Booking Entity Authorisation Reporting (BEAR)

Department of Transport & Main Roads · Oct 2024 – Mar 2026

- Developed and delivered a government reporting platform supporting regulatory workflows for internal staff and external auditors.
- Built complex, data-driven UIs including dynamic form systems and administrative dashboards for structured data submission and validation.
- Ensured full compliance with WCAG accessibility standards; designed reusable component libraries and frontend architecture patterns for consistency and maintainability.
- Collaborated in an agile team (2-week sprints) with backend engineers, stakeholders, and auditors; contributed to GitHub Actions CI/CD across multiple environments.

Tech: React, Next.js, TypeScript, AWS, GitHub Actions

ELogbook, QETouch, Port Supervisor Page

Qantas · Oct 2023 – Oct 2024

- Contributed to multiple Qantas operational platforms, including iPad applications (ELogbook, QETouch) used by pilots and engineers, and an administrative dashboard for internal users.
- Independently designed and built the Port Supervisor Page from hand-drawn concepts to production, owning frontend development and integrating with backend via new API endpoints.
- Collaborated with internal cloud teams to deploy using Kubernetes and ArgoCD; established deployment pipelines across dev, test, and production environments.
- Acted as release-day support / backup lead during Qantas release windows — reduced deployment time via improved CI/CD pipelines across environments.

Tech: React Native, React, Node.js, TypeScript, AWS Cognito, Kubernetes, ArgoCD

HAAIC Sheet App

ConocoPhillips Australia · Oct 2022 – Dec 2022

- Developed a digital application to streamline procurement workflows, replacing manual sourcing and paper-based processes with digital approvals and sign-offs.
- Designed a scalable React frontend with responsive, cross-device interfaces and reusable, performance-optimised UI components; integrated with backend APIs for data-driven workflows.

Tech: React, JavaScript, Material UI, Jira, Figma

Work Experience

NCS Australia — Senior Software Engineer

Jun 2022 – Present · Brisbane

- Led frontend architecture and delivery across multiple enterprise and government systems, focusing on scalable UI design, performance optimisation, and seamless API integration.
- Delivered end-to-end features in cross-functional agile teams, contributing to both frontend and backend workflows where required.
- Established reusable component libraries and frontend best practices, improving development efficiency and consistency across projects.
- Key achievements: delivered high-impact digital transformation projects (Department of Transport BEAR, Qantas operational platforms) supporting large-scale user bases and mission-critical workflows; led the PNG Police Check prototype on AWS, showcased at an international government conference; improved deployment efficiency and engineering velocity through better architecture patterns and CI/CD collaboration.

Healthcarelogic — Full Stack Engineer

Jun 2018 – Jun 2022

- Built full-stack, data-driven web applications with Node.js, Express, Knex.js, GraphQL, React and TypeScript, delivering business-critical features and internal systems.
- Designed and integrated secure, scalable backend services and APIs; owned release management and production deployments.
- Led the migration to TypeScript across multiple projects, reducing runtime errors and improving maintainability.

Somethings Built with Claude Code

- OzLottoStats — lottery statistics application — ozlottostats.app
- Fishing Mate — mobile weather / fishing app — fishing-mate.pages.dev

Education & Certifications

- Master of Network Management — Queensland University of Technology
- AWS Certified Cloud Practitioner
- Cisco Certified Network Professional (CCNP)
