PERSONAL SUMMARY

Full Stack Engineer with 8+ years of experience, specialising in frontend systems and now focused on AI Engineering. Experienced in building LLM applications, including RAG pipelines, real-time streaming systems, and cloud-native architectures on AWS.

Hands-on across the full AI stack — from embedding strategies and vector search (ChromaDB) to LLM orchestration (LangChain, Claude API) and low-latency inference delivery (SSE). Strong track record of delivering scalable, user-facing systems and turning advanced AI capabilities into reliable, production-ready products.

SKILLS

Frontend:

- *React, Next.js, TypeScript*
- *State Management: Redux, Jotai*
- *UI: Tailwind CSS, Material UI, Chakra UI, Bootstrap*

AI Engineering:

- *LLM Applications: RAG (Retrieval-Augmented Generation), LLM orchestration*
- *Frameworks & Tools: LangChain, LangSmith*
- *LLM APIs: OpenAI API, Claude API*
- *Embeddings & Vector Search: HuggingFace Embeddings, OpenAI Embeddings, ChromaDB*
- *Inference: Real-time streaming (SSE), prompt engineering*
- *AI Coding: Cursor, Github Copilot, Claude Code, Codex*

Backend:

- *Node.js, FastAPI*
- *API Design: REST, GraphQL*

Database:

- *Relational: PostgreSQL, MySQL*
- *NoSQL: DynamoDB, Redis*
- *Vector Database: ChromaDB*

Devops & Cloud:

- *AWS: ECS Fargate, ECR, S3, CloudFront, EFS, ALB, Cognito, Lambda, Amplify*
- *Containers & Orchestration: Docker, Docker Compose*
- *CI/CD: GitHub Actions*
- *Environment: Linux, Bash*

Qualifications and Certifications:

Queensland University of Technology :

- *Master of Network Management*

AWS:

- *AWS Certified Cloud Practitioner*

Other:

- *Cisco Certified Network Professional (CCNP)*

WORK EXPERIENCE

NCS Australia

Senior Software Engineer

Jun 2022 - Present

Brisbane

- Led frontend architecture and delivery across multiple enterprise and government systems, focusing on scalable UI design, performance optimisation, and seamless API integration.
- Delivered end-to-end features in cross-functional agile teams, contributing to both frontend and backend workflows where required.
- Established reusable component libraries and frontend best practices, improving development efficiency and consistency across projects.

Key Achievements:

- Delivered high-impact digital transformation projects, including the Department of Transport BEAR system and Qantas operational platforms, supporting large-scale user bases and mission-critical workflows.
- Led the technical implementation of the PNG Police Check prototype on AWS, which was showcased at an international government conference.
- Improved deployment efficiency and engineering velocity through better architecture patterns and CI/CD collaboration across teams.

Healthcarelogic

Jun 2018 - Jun 2022

Fullstack Web Engineer

Full Stack Engineer

Jun 2018 – Jun 2022

- Developed and delivered full-stack web applications using React, TypeScript, Node.js, and GraphQL, supporting multiple business-critical features and internal systems.
- Designed and implemented reusable frontend components and scalable application patterns, improving consistency and development efficiency across the codebase.
- Contributed to backend services and API integrations, working with Node.js, Express, and Knex.js to support data-driven applications.
- Participated in code reviews, release management, and production deployments, ensuring code quality and system stability.
- Diagnosed and resolved production issues, collaborating with cross-functional teams to maintain high system reliability.

Key Achievements:

- Led the migration to TypeScript across multiple projects, reducing runtime errors by 40% and significantly improving code maintainability.
- Built reusable component systems adopted across 15+ features, reducing development time for new features by 30%.
- Maintained 99.9% system uptime, with an average incident resolution time of under 2 hours during critical outages.

PROJECT EXPERIENCE

Booking Entity Authorisation Reporting (BEAR)

Oct 2024 - Mar 2026

Department of Transport and Main Road

Brisbane

<https://bear.tmr.qld.gov.au/>

- Developed and delivered a government reporting platform supporting regulatory workflows for internal staff and external auditors.
- Built complex, data-driven user interfaces including dynamic form systems and administrative dashboards to handle structured data submission and validation.
- Designed and implemented responsive, cross-device interfaces (desktop, tablet, mobile), ensuring consistent user experience across multiple form factors.

- Ensured full compliance with WCAG accessibility standards, balancing usability with strict government requirements.
- Designed reusable component libraries and frontend architecture patterns, improving consistency and maintainability across the application.
- Collaborated in an agile team environment (2-week sprints), working closely with backend engineers, stakeholders, and auditors to deliver stable and scalable features.
- Integrated APIs and handled complex data flows, enabling reliable data processing and real-time user interactions.
- Contributed to CI/CD workflows using GitHub Actions, supporting multiple deployment environments and improving release efficiency.

Impact:

- Delivered features reliably under tight sprint cycles while maintaining system stability in a multi-stakeholder environment.
- Improved development efficiency and reduced future maintenance costs through standardised frontend architecture.

Tech: React, Next.js, TypeScript, AWS, GitHub Actions

ELogbook, QETouch, Port Supervisor Page

Oct 2023 - Oct 2024

Qantas

- Contributed to multiple Qantas operational platforms, including iPad applications (ELogbook, QETouch) used by pilots and engineers, and an administrative dashboard for internal users.
- Maintained and enhanced the dashboard system, debugging and resolving issues across both frontend and backend to ensure system reliability in a production-critical environment.
- Worked with React Native-based mobile applications despite no prior iOS experience, quickly ramping up by understanding shared codebases and contributing to cross-platform fixes and improvements.
- Participated in monthly release cycles across multiple applications, supporting deployment coordination and ensuring stable production releases.
- Acted as release-day support / backup lead during Qantas release windows, assisting in issue triage, communication, and system monitoring.
- Independently designed and built the Port Supervisor Page from initial hand-drawn concepts to production, taking ownership of frontend development and integrating with existing backend systems via new API endpoints.
- Collaborated with internal cloud teams to deploy the application using Kubernetes and ArgoCD, leveraging internal documentation and cross-team communication to deliver successfully despite limited prior exposure.
- Established deployment pipelines across dev, test, and production environments, improving release consistency and reducing manual effort.

Impact:

- New website Port Supervisor Page reduced deployment time from ~40 minutes to 12 minutes (~70% improvement) through improved CI/CD workflows.
- Ensured stable operation of mission-critical systems through effective debugging, release support, and cross-team collaboration.
- Demonstrated strong ownership by progressing from system maintenance to independently delivering a new production system end-to-end.

Tech: React Native, React, Node.js, TypeScript, AWS Cognito, Kubernetes, ArgoCD

PNG Police Check Application

Jan 2023 - Mar 2023

Papua New Guinea government

- Delivered the full frontend for a government digital platform prototype aimed at establishing a national online service portal (similar to myGov).
- Built responsive, cross-device user interfaces (desktop and mobile) based on Figma designs, ensuring usability and consistency under tight timelines.
- Developed three applications within a 6-week timeframe, operating in a high-intensity delivery environment with weekly sprint cycles.
- Rapidly translated evolving requirements into working applications, balancing speed of delivery with code quality and usability.

Impact:

- Successfully delivered a high-visibility government prototype under aggressive timelines and iterative sprint delivery.
- Contributed to a solution selected for presentation at an international government conference (Seattle).

Tech: Next.js, JavaScript, AWS Amplify UI, Axios, Figma

HAAIC Sheet App

Oct 2022 - Dec 2022

ConocoPhillips Australia

Brisbane

- Developed a digital application to streamline procurement workflows, replacing manual sourcing, paper-based processes, and enabling digital approvals and sign-offs.
- Designed and implemented scalable frontend architecture using React, delivering responsive, cross-device interfaces (desktop, tablet, mobile).
- Built reusable and performance-optimised UI components, improving consistency and accelerating feature development across the application.
- Integrated with backend APIs to support data-driven workflows and ensure reliable data processing.
- Collaborated closely with project managers and stakeholders to deliver features on time and align with business requirements.
- Continued to support and enhance the application through ongoing client engagements, taking ownership of frontend development for new features and improvements.

Impact:

- Improved operational efficiency by digitising procurement and approval workflows.
- Established a maintainable frontend architecture enabling ongoing feature expansion.
- Built long-term client trust, contributing to repeat engagements and continued system evolution.

Tech: React, JavaScript, Material UI, Jira, Figma

AI Interactive Resume

Apr 2026 - Apr 2026

Personal Project

<https://www.jackiejin.dev>

Designed and built a production-grade AI application enabling users to interactively query resume data via natural language.

- Architected an end-to-end RAG (Retrieval-Augmented Generation) pipeline, including:
 - Structured data modelling (YAML-based resume representation)
 - Text chunking and embedding using HuggingFace sentence transformers
 - Vector storage and retrieval using ChromaDB
 - Context-aware retrieval integrated with LLM inference
- Implemented LLM orchestration using LangChain, integrating Anthropic Claude API for response generation with grounded context.

- Built a real-time backend using FastAPI with Server-Sent Events (SSE) to support low-latency streaming responses.
- Developed a conversational UI using Next.js, enabling real-time interaction and streaming updates.
- Designed and deployed a cloud-native architecture on AWS, including:
 - ECS Fargate for backend services
 - S3 + CloudFront for frontend hosting
 - EFS for persistent vector storage
 - ECR for container management
- Built CI/CD pipelines using GitHub Actions, ensuring reproducible deployments and environment consistency.

Impact:

- Delivered a fully functional, end-to-end AI system demonstrating capabilities across LLM integration, vector search, and real-time inference.
- Transformed a traditional resume into an interactive AI experience, improving information accessibility and user engagement.
- Demonstrated strong ownership across the full stack, including AI pipeline, backend, frontend, and infrastructure.

Tech: LangChain, Claude API, ChromaDB, HuggingFace, FastAPI, Next.js, AWS (ECS, S3, CloudFront, EFS), Docker, GitHub Actions
